Summary
I spent the most time in the Logistics and Distribution department where I completed my major project. I worked on creating a program that would automatically calculate the amount of stock for each machine spare part the warehouse needs to order for the upcoming months. This cut down calculation times from two hours down to a few minutes. I also spent a good amount of time learning and gaining skills in various departments, including Finance, Marketing, Sales, and Business Analytics.

Relation to Your Major
Logistics is a major part of the supply chain process, and working at the department helped me understand how it ties into the industrial engineering as a whole. One of the core focuses of my major is Optimization, which I used as the goal of my major project. I also had the opportunity to work with Finance, and I plan to do my concentration in Financial and Economic Systems so it gave me a whole new insight into the field. I also spent some time in the Quality Control Department which focuses on improving the efficiency of the business, and is something I may want to pursue in a career with my degree.

Fun Cultural Experience
I got to attend the office's annual Iftar party, where I got to try a range of Emirati and Arabic Cuisine, including Mandhi, Manakeesh, and Umm Ali. It was a great experience as I learned a lot about Emirati culture that I didn't know of. I got the opportunity to meet many Emiratis at the event, and overall it was interesting to observe Ramadan in an Arab country.
